

WEYLUX

Manufacturing in England for over a Century

Mobile Chair Scales

Approved to EC Directive 90/384/EEC
Quality Assured to ISO9001

Complete Comfort and Convenience

WEYMED

WEYLUX

All WEYLUX scales are calibrated to the higher Class III accuracy which is a necessity for accurate weighing

Complete Comfort and Convenience

WEYLUX and WEYMED scales simplify weighing the infirm. The scales are wheeled to patients on the strong steel manoeuvrable trolley fitted with braked castors. Both arm rests swivel up to enable an unsteady person to be helped into the spacious chair and the footrest is engaged to support the feet. For the disabled there is an optional seat belt.

Model 890/BMI

CE approved high accuracy Class III

The unique construction of a lever system linked to the electronics in the indicator head enables heavy use without damage. **A special feature is the high capacity of 250kg yet fine division of 50g** displayed on a bright mains powered LED. The auto 'hold' ensures a 'flicker free' reading.

Length 830mm Chair Width 560mm Height 900mm Weight 22kg

WEYLUX Body Mass Index Facility

BMI is simply gained by pressing BMI key and entering height after weight displays.

Model 90

CE approved high accuracy Class III

Accurate traditional beam scales.

Capacity is 160kg x 50g divisions.

Length 830mm Chair Width 560mm Height 900mm

Weight 25kg

Model 590/BMI

CE approved high accuracy Class III

These very robust scales fitted to a strong steel manoeuvrable trolley with braked castors have the special feature of a unique, large, backlit multi-display to show weight, height and body mass index. And the indicator head may be adjusted to any convenient angle. The spacious, washable chair seat comfortably accommodates overweight patients. Power is from a long life rechargeable battery. A charging adaptor is provided. Capacity is up to 200kg down to 50g divisions.

Length 800mm Chair width 560mm Height 900mm Weight 22kg

Swivelled Arm Rests

In the 'up' position as illustrated on model 590/BMI the patient can be more easily eased into the chair. The rests are then lowered to support the patient's arms.

Retractable Foot

This is fitted to all models. The retracted position better enables the patient to access the chair. The engaged position ensures the feet do not touch the floor which would result in a false reading of weight.

Foot rest retracted

Foot rest engaged

The WEYMED Body Mass Index Facility

The innovative concept enables the doctor to demonstrate to patients any degree of over or under weight. Height and ideal BMI are entered and target weight displays. The patient sits on the scales and actual weight and BMI display.

WEYMED

Model 590J/BMI - Specially Designed for Care Homes

CE approved high accuracy Class III

Compact Design

These robust scales are very compactly designed which makes them particularly suitable for use in care homes where space may be restricted. Yet the chair remains spacious with a width of 590mm to accommodate large patients. They easily manoeuvre round tight corners and the braked castors keep the base stable whilst patients are weighed.

Comprehensive Facilities

Specifications are similar to model 590/BMI detailed overleaf with capacity of 200kg down to 50g, body mass index facility, back lit display, retractable foot rest and power from a re-chargeable battery. A charging adaptor is provided.

Constant Accuracy

The scales are designed to give many years of hard use whilst maintaining accuracy without the need for ongoing repair and maintenance.

CE Approved

They are approved and verified to the higher Class III accuracy which is a necessity for accurate weighing.

Car Transportable

Model 590J/BMI is optionally available with the chair frame designed to be simply disassembled. This allows the scales to be fitted easily in a car for home visits.

Length 600mm Chair Width 590mm Height 810mm
Weight 16kg
