

Animal Weighing in a Cattle Market

We have recently set up a Cattle Market weighing system using a GSE 562 Indicator, & a remote display connected to an existing cattle weighbridge. A number of Cattle or Sheep are herded onto the platform, the operator keys in the quantity of animals into the indicator and the average weight is displayed on both the indicator and the remote display. The remote display holds the average weight to allow another batch of animals to be weighed whilst the bidding takes place.

Budget PLU System with Product Lookup and Labelling

With product recall, price computing, use-by date calculation, totalising and customised label printing, the system provides all of the basic requirements for an outer case marking application. This system can be tailor-made to your specification

Bespoke Counting Program

Using the capabilities of the programmable bench scales to the full, the counting applications provide bar code scanning, label printing, inventory control and interfacing to host computers. As supplied to a manufacturer making & assembling a quantity of both small & large parts into kiting packs.

Average Weight System

Designed to help a packer comply with the average weight legislation, the system provides batch & sample statistics, operator prompting and output to a printer or host computer.

Recipe System

Capable of controlling both manual and automatic ingredient addition, the recipe system enables easy product selection, operator prompting with visual display, batch number traceability and output to a printer or host computer.

Checkweighing Program

The LCD display provides a graphical display of live weight against target together with product details which are looked up from an internal database. Automatic adjustments of operator's targets over a production batch.

Wireless communication,& External colour lamps (Traffic Lights)

ALL THE ABOVE SYSTEMS CAN BE SUPPLIED WITH SOFTWARE WRITTEN TO EACH CUSTOMERS SPECIFICATION
